

Dear Vinted Engineering Academy Team,

My name is Tymofii Svyrhun, I am an Informatics Systems student at Vytautas Magnus University. I am highly motivated to grow as a backend engineer, and I believe Vinted is the perfect environment for this growth.

I am strongly inspired by Vinted's mission "to make second-hand the first choice". I admire how Vinted combines technology, sustainability, and a large-scale marketplace model. As someone who studies informatics, I am fascinated by the engineering challenges that support millions of users, high traffic systems, and the operational side of deliveries. This mix of purpose, impact, and technical complexity is a big reason why I want to join Vinted.

During my studies and personal projects, I made solid backend engineering foundations. I enjoy building complete backend systems. As part of my preparation for the Academy, I developed a small like Vinted backend project with user authentication, protected routes, marketplace item structure, filtering, pagination, and category management. Creating this project helped me improve my code quality, debugging skills, and general backend architecture thinking.

In addition, I have experience with databases, SQL and data analysis through university courses and several other projects. I believe this gives me a strong understanding of real-world systems, data modeling, and how marketplace features connect to operational logic such as routing and item flows. I want to contribute to Vinted or backend services that support marketplace integrity and user experience in the future.

I want to join the Engineering Academy to learn from experienced Vinted engineers, understand how high-quality production code is written, and improve my skills in large-scale backend systems. I am especially interested in testing strategies, system design and collaborating in a well-organized engineering team. I am motivated, fast-learning, and always ready to improve.

Thank you for considering my application. I would be glad to discuss my projects and motivation in more detail during an interview. I am very excited about the possibility of learning from Vinted and contributing to the team.

Sincerely,

Tymofii Svyrhun
