

Dear Vinted Engineering Academy Team,

My name is Tymofii Svyrhun, and I am a second-year Informatics Systems student at Vytautas Magnus University. I am writing to apply for the Backend Engineering track at the Vinted Academy because I want to build fast, reliable systems and learn how to handle real-world backend applications at scale.

Vinted's mission to make second-hand the first choice is something I really admire. From a programming perspective, I am fascinated by how your platform supports millions of users and keeps track of massive amounts of data, items, and deliveries smoothly. Dealing with that kind of traffic is exactly the kind of engineering challenge I want to learn how to solve.

Over the past year, I have focused heavily on learning how to build clean, functioning backend systems. Outside of university, I completed an intensive Python course where I practiced writing structured code, working with databases, and designing secure APIs. To put this into practice, I built a Vinted-like marketplace backend from scratch using FastAPI and Dockerized PostgreSQL. I implemented features like JWT user authentication, item CRUD operations, item filtering, and pagination. Building this project taught me a lot about databases and how to debug tricky issues.

I also love challenging myself with new technologies. Recently, I started learning Go because of how efficiently it handles background tasks. To learn by doing, I just built a concurrent website uptime monitor that uses goroutines and sync mechanisms to check multiple URLs at the same time without blocking the program. Between my experience with Python web frameworks, SQL databases, and my recent work in Go, I feel ready to dive into Vinted's technical environment.

The Vinted Academy is the perfect place for me to grow. I want to move past just writing solo code and learn how professional teams handle system design, testing strategies, and writing high-quality production code. I am a disciplined, fast learner, and I am ready to put in the work to contribute to the team.

Thank you for your time and consideration. I would love the opportunity to talk more about my projects and my motivation during an interview.

Sincerely,

Tymofii Svyrhun
