Lithuania, Kaunas

Tech Skills

- **Programming Languages:**

Python (Advanced Core, Typing), Go
(Basics / Modules & Interfaces), SQL, C++
(Basics)

- **Backend Architecture:**

FastAPI, Django, REST APIs, SOLID
Principles, Design Patterns, Web Security
Basics

- **Concurrency & Async:**

Asyncio, Aiohttp, Multithreading &
Multiprocessing

- **Databases & Messaging:**

PostgreSQL, MongoDB, Redis (Caching),
RabbitMQ (Message Broker), SQLAlchemy
ORM, Django ORM

- **DevOps, Testing & Tools:**

Docker, Poetry, Git, Postman, Pytest,
Unittest, Linux Basics

Work Experience

Remote Interpreter (English –
Russian) | Teleperformance | Active
Engagement

Soft Skills

- Agile Problem Solving
- Critical Thinking under stress
- Fast Technical Learning Curve

Summary

Second-year Informatics Systems student specializing in scalable backend engineering, asynchronous architectures, and relational database design. Proficient in building secure REST APIs using Python (FastAPI, Django) and expanding technical expertise into high-performance systems with Go. Experienced in containerization (Docker) and integrating machine learning models into backend infrastructure.

Project Experience

Concurrent Uptime Monitor & Alerting Engine (Go) [[Project Link](#)]

- Developed a high-performance utility that concurrently monitors web service availability using Go's native primitives.
- Implemented interface abstractions (Alerter) to decouple core system logic from reporting channels.
- Utilized goroutines and pointers with sync.WaitGroup tracking to execute safe, non-blocking background HTTP requests.

Vinted-like Marketplace Backend (FastAPI, PostgreSQL, Docker) | [[Project Link](#)]

- Designed a marketplace REST API featuring secure, role-based user authentication using JWT tokens.
- Engineered optimized queries via SQLAlchemy ORM for item CRUD operations, multi-parameter filtering, and pagination.
- Configured Pydantic schemas for data validation and containerized the relational database layer using Docker.

Automated Parking Lot System (Django, TensorFlow/Keras, Docker)

- Built a backend business-logic engine managing automatic vehicle entry logs, exit records, and pricing algorithms.
- Integrated a TensorFlow/Keras license plate recognition model output directly into the database layer using Django ORM.

Education

IT School Golt (Kyiv) 2023-2024

Vytautas Magnus University (Kaunas)
2024- 2028

- Bachelor Informatics Systems
- Minor German Language and Communication

Languages

- English - C1
- Ukrainian - C2
- Russian - C2
- German - B2
